

Rules for Assigning Oxidation Numbers	Summary
1) the oxidation number of the atom or molecule of a free element is zero	Element = 0
2) the oxidation number of a monatomic ion equals its charge	
3) In compounds, oxygen has an oxidation number of -2, except in peroxides, where it is -1	Oxygen = -2
4) In compounds containing hydrogen, hydrogen has an oxidation number of +1	Hydrogen = +1
5) In compounds, fluorine is ALWAYS assigned an oxidation number of -1	Fluorine = -1
6) The sum of the oxidation states for an electrically neutral compound must be zero	

**Practice:**

Assign oxidation numbers to each element in each of the following substances.

1.  $Mg^{2+}$  \_\_\_\_\_
2.  $N^{3-}$  \_\_\_\_\_
3.  $H_2O$  \_\_\_\_\_
4.  $HCl$  \_\_\_\_\_
5.  $O_2$  \_\_\_\_\_
6.  $NO_3^-$  \_\_\_\_\_
7.  $H_2O_2$  \_\_\_\_\_
8.  $AlBr_3$  \_\_\_\_\_
9.  $H_2SO_4$  \_\_\_\_\_
10.  $CrO_4^{2-}$  \_\_\_\_\_
11.  $Cr_2O_7^{2-}$  \_\_\_\_\_
12.  $C_2H_5OH$  \_\_\_\_\_
13.  $K_2SO_3$  \_\_\_\_\_
14.  $K_2SO_4$  \_\_\_\_\_
15.  $NH_4OH$  \_\_\_\_\_
16.  $NH_3$  \_\_\_\_\_
17.  $Ca(OH)_2$  \_\_\_\_\_
18.  $P_4$  \_\_\_\_\_
19.  $LiNO_3$  \_\_\_\_\_
20.  $MgCO_3$  \_\_\_\_\_

## Redox Reaction Prediction

### Important Oxidizers

MnO<sub>4</sub><sup>-</sup> (acid solution)  
MnO<sub>4</sub><sup>-</sup> (basic solution)  
MnO<sub>2</sub> (acid solution)  
Cr<sub>2</sub>O<sub>7</sub><sup>2-</sup> (acid)  
CrO<sub>4</sub><sup>2-</sup>  
HNO<sub>3</sub>, conc  
HNO<sub>3</sub>, dilute  
H<sub>2</sub>SO<sub>4</sub>, hot conc  
Metallic Ions  
Free Halogens  
HClO<sub>4</sub>  
Na<sub>2</sub>O<sub>2</sub>  
H<sub>2</sub>O<sub>2</sub>

### Formed in reaction

Mn(II)  
MnO<sub>2</sub>  
Mn(II)  
Cr(III)  
Cr(III)  
NO<sub>2</sub>  
NO  
SO<sub>2</sub>  
Metalloous Ions  
Halide ions  
Cl<sup>-</sup>  
OH<sup>-</sup>  
O<sub>2</sub>

### Important Reducers

Halide Ions  
Free Metals  
Metalloous Ions  
Nitrite Ions  
Sulfite Ions  
Free Halogens (dil, basic sol)  
Free Halogens (conc, basic sol)  
C<sub>2</sub>O<sub>4</sub><sup>2-</sup>

### Formed in Reaction

Halogens  
Metal Ions  
Metallic ions  
Nitrate Ions  
SO<sub>4</sub><sup>2-</sup>  
Hypohalite ions  
Halate ions  
CO<sub>2</sub>

Redox reactions involve the transfer of electrons. The oxidation numbers of at least two elements must change. Single replacement, some combination and some decomposition reactions are redox reactions.

To predict the products of a redox reaction, look at the reagents given to see if there is both an oxidizing agent and a reducing agent. When a problem mentions an acidic or basic solution, it is probably a redox reaction.

### Steps in Balancing Redox Reactions (acidic solution)

- Step #1 - Write the half-reactions
- Step #2 - Balance the elements that are NOT oxygen and hydrogen
- Step #3 - Balance oxygen with water
- Step #4 - Balance hydrogen with hydrogen ions, H<sup>+</sup>
- Step #5 - Balance charges with electrons, e<sup>-</sup>
- Step #6 - Balance electrons lost and gained
- Step #7 - Sum the two half-reactions

### Steps in Balancing Redox Reactions (basic solution)

- Step #1 - Write the half-reactions
- Step #2 - Balance the elements that are NOT oxygen and hydrogen
- Step #3 - Balance oxygen with water
- Step #4 - Balance hydrogen with hydrogen ions, H<sup>+</sup>
- Step #5 - Balance charges with electrons, e<sup>-</sup>
- Step #6 - Balance electrons lost and gained
- Step #7 - Sum the two half-reactions
- \*\*Step #8 - Neutralize H<sup>+</sup> ion with OH<sup>-</sup> ion. Remember to add equal amount of OH<sup>-</sup> to EACH side.
- \*\*Step #9 - Remove water molecules that are common to both sides of the equation

\*\* Only steps that differ from acidic solution
